Running the Java Email Example

Overview

This project shows the basic usage of generating a report and attaching it to an email using Java Mail. The project is set up to use gmail by default and all you need to do is enter your gmail password and account name to get the sample working.

Requirements

- Windward Reports Java Engine
  - Available from http://www.windward.net/downloads.php
  - Installation Tutorial
- IntelliJ IDEA v11
  - Available from http://www.jetbrains.com/idea/download/index.html
  - Installation Tutorial
- Minimum Java JDK v1.4
  - Available from http://www.oracle.com/technetwork/java/javase/downloads/index.html
  - Installation Tutorial

Tutorial

Step One: Open the Command Line Project

1. Open Windows explorer and navigate to C:\Program Files (x86)\Windward Studios\Windward Reports Java Engine\demo\Samples\Java\Email
2. Open the Email.ipr file to open the IntelliJ project.

Step Two: Run the code

1. Type in your gmail email for username and fill in password and who you are sending the email to
2. On the toolbar on the top of the IntelliJ window, click the run icon.

   Note: If you get an error message stating 'cannot start compiler: the SDK is not specified for module "RunReport"', your Java Development Kit is not correctly configured with IntelliJ. You can correct this by opening File > Project Structure and selecting the correct SDK.

3. Open the email in the email account you sent it to and open the attachment.
